

the Jane Goodall Institute

Jane Goodall, Ph.D., DBE
Founder, the Jane Goodall Institute &
UN Messenger of Peace

In July 1960, Jane Goodall began her landmark study of chimpanzees in what is now Tanzania under the mentorship of famed anthropologist and paleontologist Dr. Louis Leakey. Her work at Gombe Stream would become the foundation of future primatological research and redefine the relationship between humans and animals.

In 1977, Dr. Goodall established the Jane Goodall Institute (JGI), which continues the Gombe research and is a global leader in the effort to protect chimpanzees and their habitats. Today, the Institute is widely recognized for establishing innovative, community-centered conservation and development programs in Africa, and Jane Goodall's Roots & Shoots, JGI's global environmental and humanitarian youth network, which has almost 150,000 members in 110 countries.

Dr. Goodall travels an average 300 days per year, speaking about the threats facing chimpanzees, other environmental crises, and her reasons for hope that humankind will solve the problems it has imposed on our planet. She continually urges her audiences to recognize their personal responsibility and ability to effect change. "Every individual counts," she says. "Every individual has a role to play. Every individual makes a difference."

Dr. Goodall's scores of honors include the Medal of Tanzania, the National Geographic Society's Hubbard Medal, Japan's prestigious Kyoto Prize, Spain's Prince of Asturias Award for Technical and Scientific Research, the Benjamin Franklin Medal in Life Science, and the Gandhi/King Award for Nonviolence. In April 2002, Secretary-General Kofi Annan named Dr. Goodall a United Nations Messenger of Peace, and she was reappointed in June 2007 by Secretary General Ban Ki-moon. In 2004, in a ceremony at Buckingham Palace, Dr. Goodall was invested as a Dame of the British Empire, the female equivalent of knighthood. In 2006, Dr. Goodall received the French Legion of Honor, presented by Prime Minister Dominique de Villepin, as well as the UNESCO Gold Medal Award.

Dr. Goodall's list of publications includes *Harvest for Hope: A Guide to Mindful Eating*, two overviews of her work at Gombe — *In the Shadow of Man* and *Through a Window* — as well as two autobiographies in letters, the best-selling autobiography *Reason for Hope* and many children's books. *The Chimpanzees of Gombe: Patterns of Behavior* is the definitive scientific work on chimpanzees and is the culmination of Dr. Goodall's scientific career.

She has been the subject of numerous television documentaries and is featured in the large-screen format film *Jane Goodall's Wild Chimpanzees* (2002). She also has been featured in five Animal Planet specials—*Jane Goodall's Return to Gombe*, *Jane Goodall's State of the Great Ape*, *Jane Goodall's Heroes*, *When Animals Talk* and most recently, *Almost Human*.
