

# THE STORY OF DR. JANE GOODALL AND THE CHIMP EDEN

27th October - 26th November, 2017

## Becoming Jane

She was a novice scientist who became famous because of her groundbreaking studies of chimpanzees. Newly revealed images shed light on how she did it, the compromises she made, and the photographer she loved.

The early discoveries that drew National Geographic's attention occurred with no cameras present. Jane Goodall disliked being photographed but would come to accept it as a way to gain support for her work.
